ABSTRACT

Artificial Intelligence(AI) has been rapidly developed for the past decades and the commercial application of it arouses much interest around the world. In this paper, we firstly briefly discuss the industry chain of artificial intelligence. Then, we presented mostly recently results of artificial intelligences application over four different fields in China including financial, medical, education and government. We also proposed a new evaluation metrics for a industry field that has been influenced positively by AI. This evaluation metrics can quantify four parts: the filed is sustainable with tenable data, popular among investment choices, the data in this filed is easily obtained, and AI applications can solve difficult problem in this filed.
