#### **ABSTRACT**

Since Davos Forum in 2016, the whole world started talking about the “4th Industrial Revolution”. But it has been an ambiguous term to most, and it looked dubious to many.

However, we should recognize how it is already with us and how much impact it is making on the existing industries.

In this presentation, I will show where we are in the progress of the 4th Industrial Revolution, and what will be the future impact on the world.
