

MOSSLAND

WHITE PAPER 3.0

August 8, 2023

Agenda

1. Team Capability and Business Performance
 - A. Team Capability
 - B. Business Performance
2. Creating a Fair Environment for Token Holders
3. Technical Capabilities and Advancement
4. Chain Activeness and User Participation
5. Liquidity
6. Compliance with Regulations

1. Team Capability and Business Performance

Mossland team has the experience of developing and launching 12 blockchain services since 2017. Moreover, the team possesses expertise in directly developing core blockchain technology and conducting legal reviews and marketing for the services. Rather than emphasizing individual team members' backgrounds, the team showcased tangible evidence through the 12 services launched over the past five years, demonstrating the project's value and vision.

Mosscoin holders were able to transparently evaluate Mossland team's capabilities and make objective judgments about the future value of the Mossland project, as they had direct access to the entire portfolio of successful and unsuccessful services.

Development Experience in Core Blockchain Technology

Ethereum Network

- NFT Auction Service (Mossland The Auction)
- Location-based Reward Service (Mossland The Hunters)
- Swap Service Development using the Luniverse Ethereum Bridge Contract

Klaytn Network

- NFT Minting, Reveal, and Contract Development (PFP-NFT Project)
- Decentralized Autonomous Organization (DAO) Voting System Development
- Klaytn NFT Minting Service utilizing Luniverse Tokens

Luniverse Network

- Development of Decentralized Governance Framework
- Web3 Metaverse Service Development
- Ongoing Development of ERC20 Token Bridge

Legal Review and Business Experience in Blockchain Ventures

- 2018 Singapore: Legal memo of Singapore MAS regulations and securities laws (Mosscoin issuance)
- 2018 USA: Legal memo of US securities laws and CFTC regulations (Mosscoin for Bittrex US listing purposes)
- 2019 Malta (Europe): Legal memo for Bittrex Global
- 2019 Indonesia: Legal memo for blockchain gaming service
- 2020 Singapore: Legal memo of PSA (Payment Service Act)
- 2021 Korea: Legal memo of Mosscoin buyback model
- 2021 Korea: Legal memo of Mosscoin securities laws
- 2023 EU: Legal memo of Mosscoin as a financial product or electronic money

Introduction of the Registered Directors of the Corporation for Mosscoin

Name	Role	Experience
WOO RAM SON	CEO (Management)	Mossland (2018 ~), Software Engineer at Samsung Electronics, Master's Degree in Science from Seoul National University
MINUK KIM	CTO (Technology)	Mossland Technology Lead (2018 ~), S/W Engineer at Pantech, Ph.D. candidate from Konkuk University
YOUNGDAE CHO	CPO (Product)	Mossland Development Lead (2018 ~), NHN NEXT, Bachelor's Degree from Sungkyunkwan University

Partner	Experience	Responsibilities
ML GAMES PTE LTD	NFT Auction, Location-based Gaming Reward Service, Web3-based Metaverse Development	Mosscoin Development, Mossland Service Development
Puffin Planet	Akamir NFT, LG Life Health NFT, Doji Sound Club Metaverse, MIB19 NFT	Mossland Metaverse Development
Pixellica	Junho Kwon (Former NCsoft Final Blade Art Director), Lamp Chronicle Game Release	Game Development and Research on Blockchain Technology Integration
H9	Technology-based Design Agency Collaborating with Various Large Corporations Since 2010	Mossland Service (The Hunters) Development Collaboration
SEWORKS	Security Company Operated by Hong Min-pyo, Known as One of the World's Top 3 Hackers	Blockchain Security (Mosscoin)
AI Spera	Security Company Operated by Kim Hwi-kang, Principal of KAIST-Pohang University Hackathon	Blockchain Security (NFT)
NDotLight	Developer of 'NdotCAD,' a 3D Content Creation Software Applicable to Metaverse Platforms	Metaverse Content Creation and NFT Collaboration

Team Capability

Team Decentralization and Open Source Adoption

Mossland is striving to increase the long-term sustainability of the project by making all development outcomes publicly available as open source and transitioning into a decentralized development team. The goal is to minimize the risks of project delays and disruptions while expanding the Mossland project development ecosystem.

Starting from the second half of 2022, Mossland began releasing the source code of its projects through GitHub (<https://github.com/mossland>).

Team Capability

Team Decentralization and Open Source Adoption

Mossland is advancing the Mossland project through collaboration with six partner companies, aiming to decentralize the development team. ML GAMES PTE LTD, a subsidiary of Mossland Foundation, is responsible for the overall development and operation of Mossland services. Together with H9, Mossland developed Mossland The Hunters. Additionally, Pixellica has been working on efforts to integrate gaming and blockchain.

Since 2021, Mossland has been actively developing Metaverse services and Mosscoin swap services as open-source projects in collaboration with Puffin Planet. In 2023, Mossland is gearing up for Metaverse content production in partnership with NDotLight.

Furthermore, Mossland actively encourages the participation of individuals and groups outside the project team to promote the blockchain development ecosystem. To achieve this, Mossland has successfully hosted various events, such as Blockchain Game Jam Seoul (2018), Metaverse Hackathon Open (2022), and sponsorship participation in university blockchain hackathons (since 2018).

Business Performance

Overview of Mossland Business Performance

Mossland has launched 12 blockchain services over the past 6 years, from 2017 to 2023. In a blockchain market where utilization beyond token trading was limited, Mossland sought to explore various blockchain applications by developing auction, reward, gaming, and NFT services, pioneering new markets.

In the first to third quarters of 2022, Mossland generated approximately 2.7 billion KRW (approximately equal to 2 million USD) in revenue through its NFT business. In 2021, Mossland bought back 1,613,531 MOC through revenue generated from e-sports services, and in 2020, it bought back 3,884,058 MOC from game-related revenue. In 2018, the auction service generated around 4.4 billion KRW (approximately equal to 3.3 million USD) in revenue, with approximately 12.7 billion KRW (approximately equal to 9.6 million USD) worth of Mosscoin deposited for service use. The trading volume of Mosscoin within the service reached around 7.4 million USD per day, demonstrating the potential of blockchain services with higher trading volumes on the platform than on exchanges.

Throughout the past 5 years, Mossland achieved business success by integrating various fields such as NFT auction, reward, gaming, and e-sports with blockchain while adhering to legal compliance, resulting in the discovery of sustainable business models.

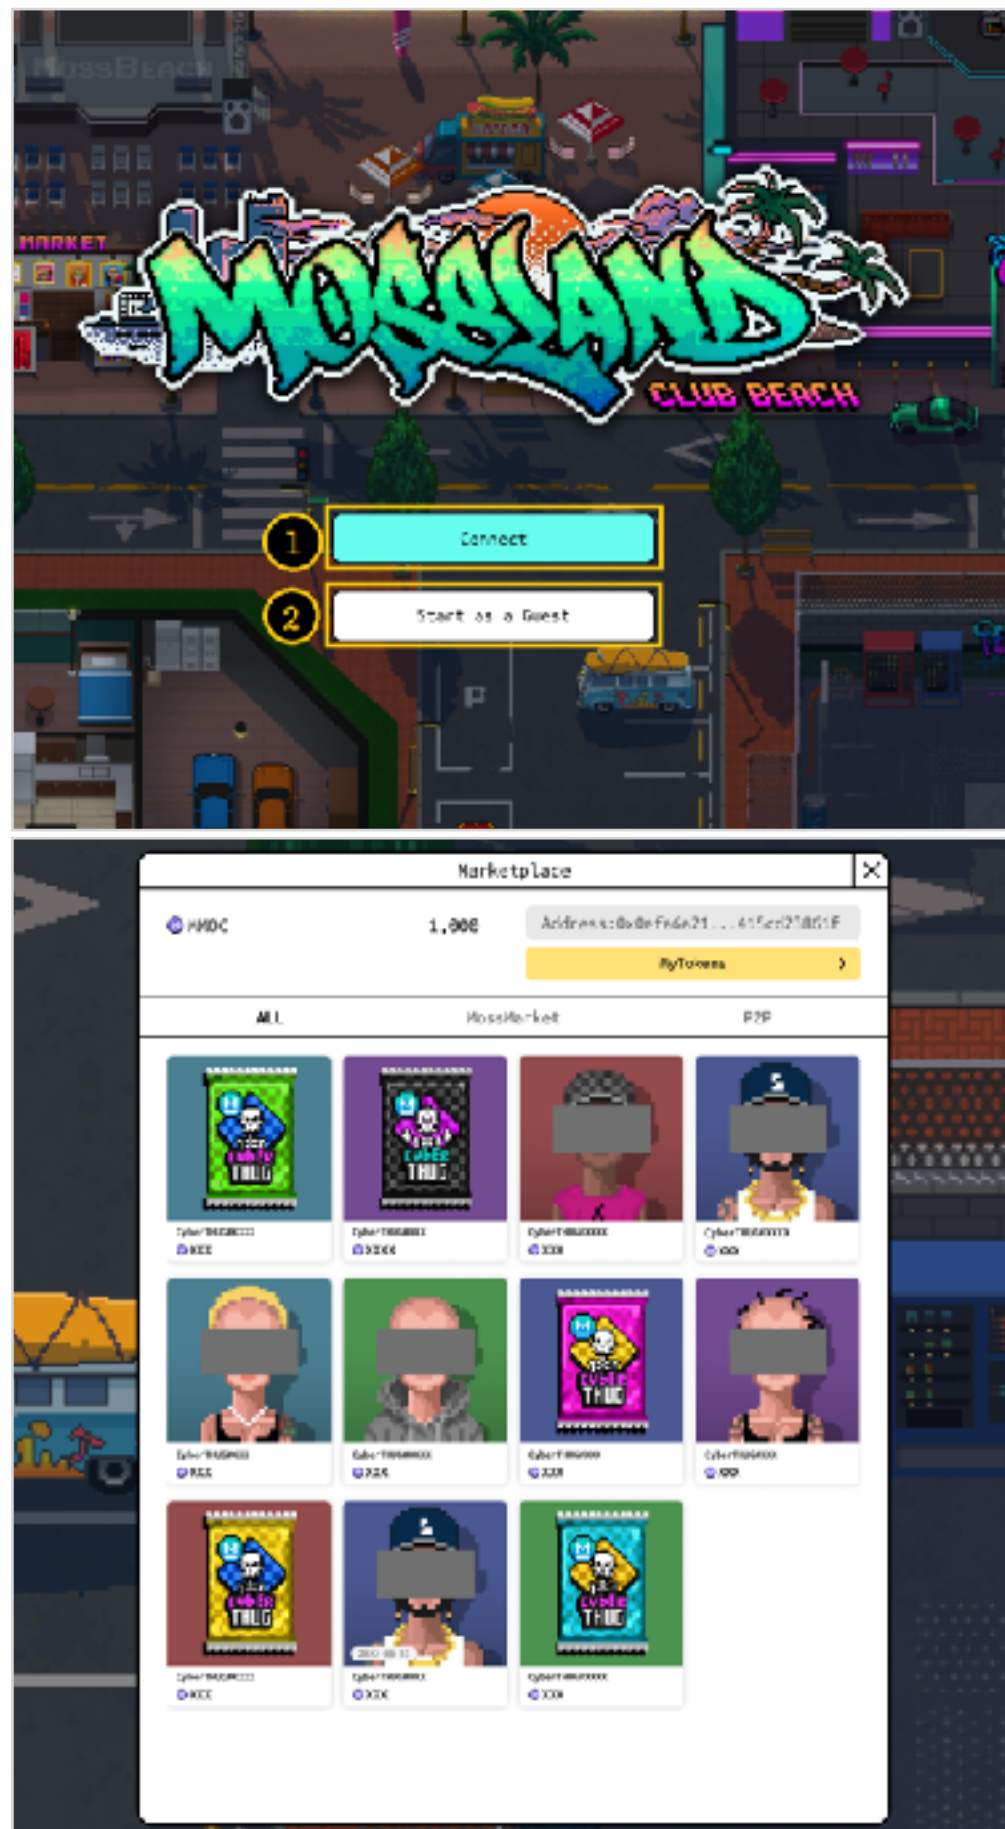

Business Performance

Introduction to Mossland Services

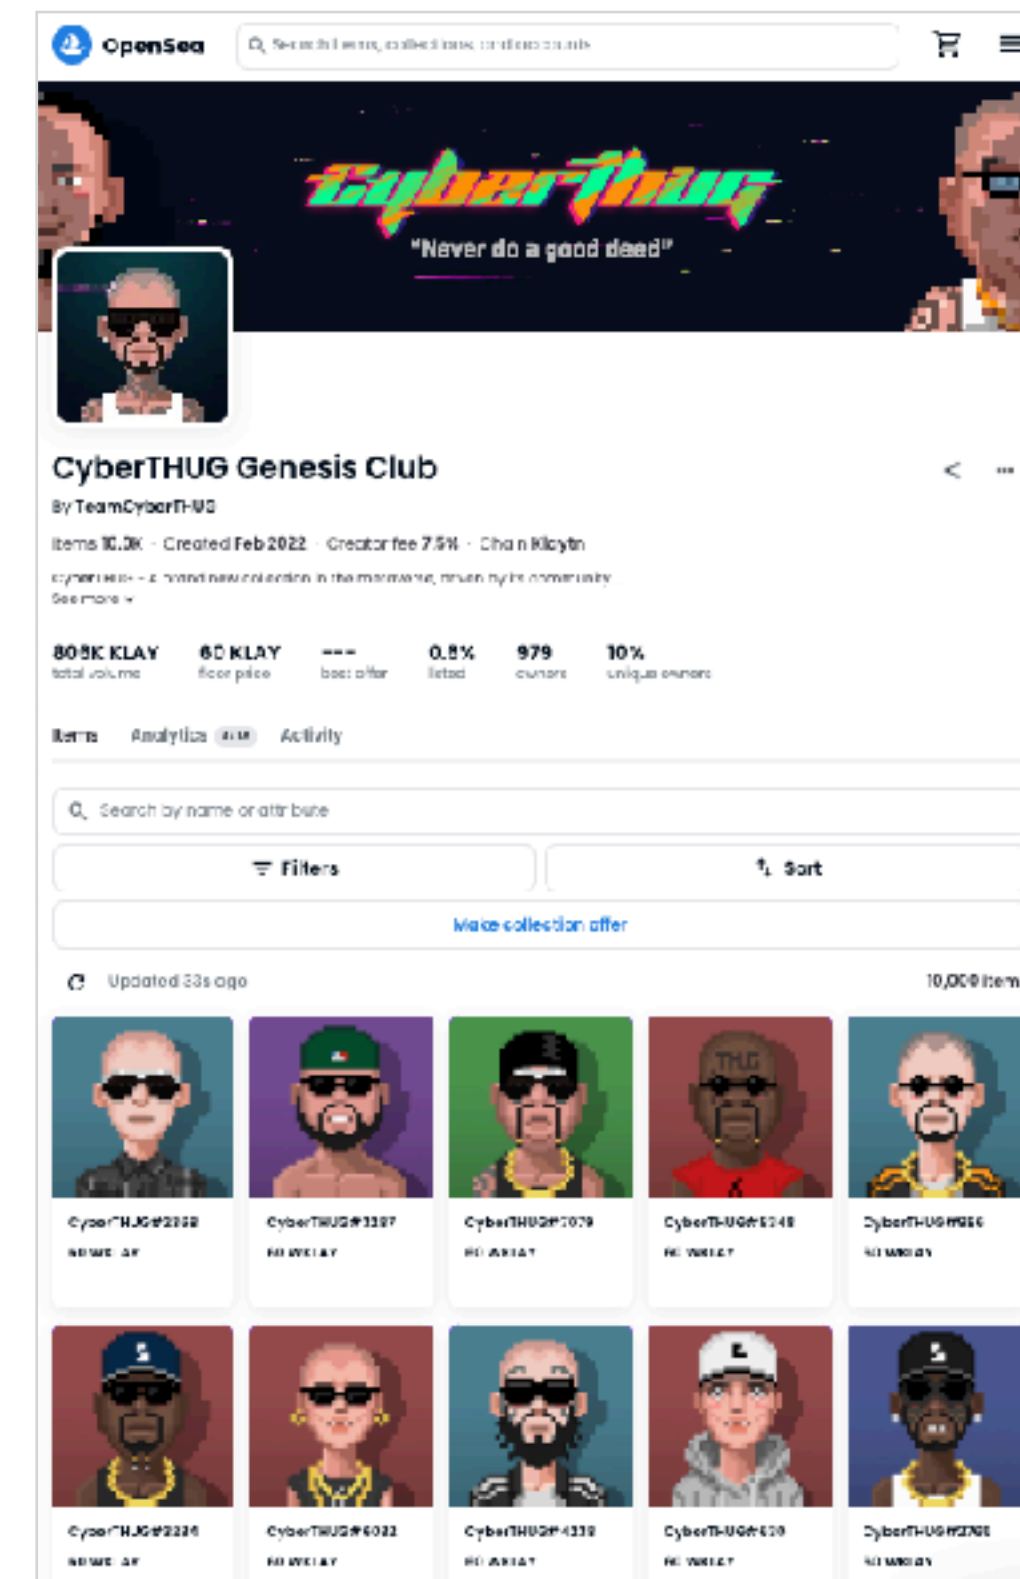

Mossland Metaverse Oct 2022

A Metaverse Platform Based on Open Source, Encompassing Various Mossland Services

Business Performance

Introduction to Mossland Services

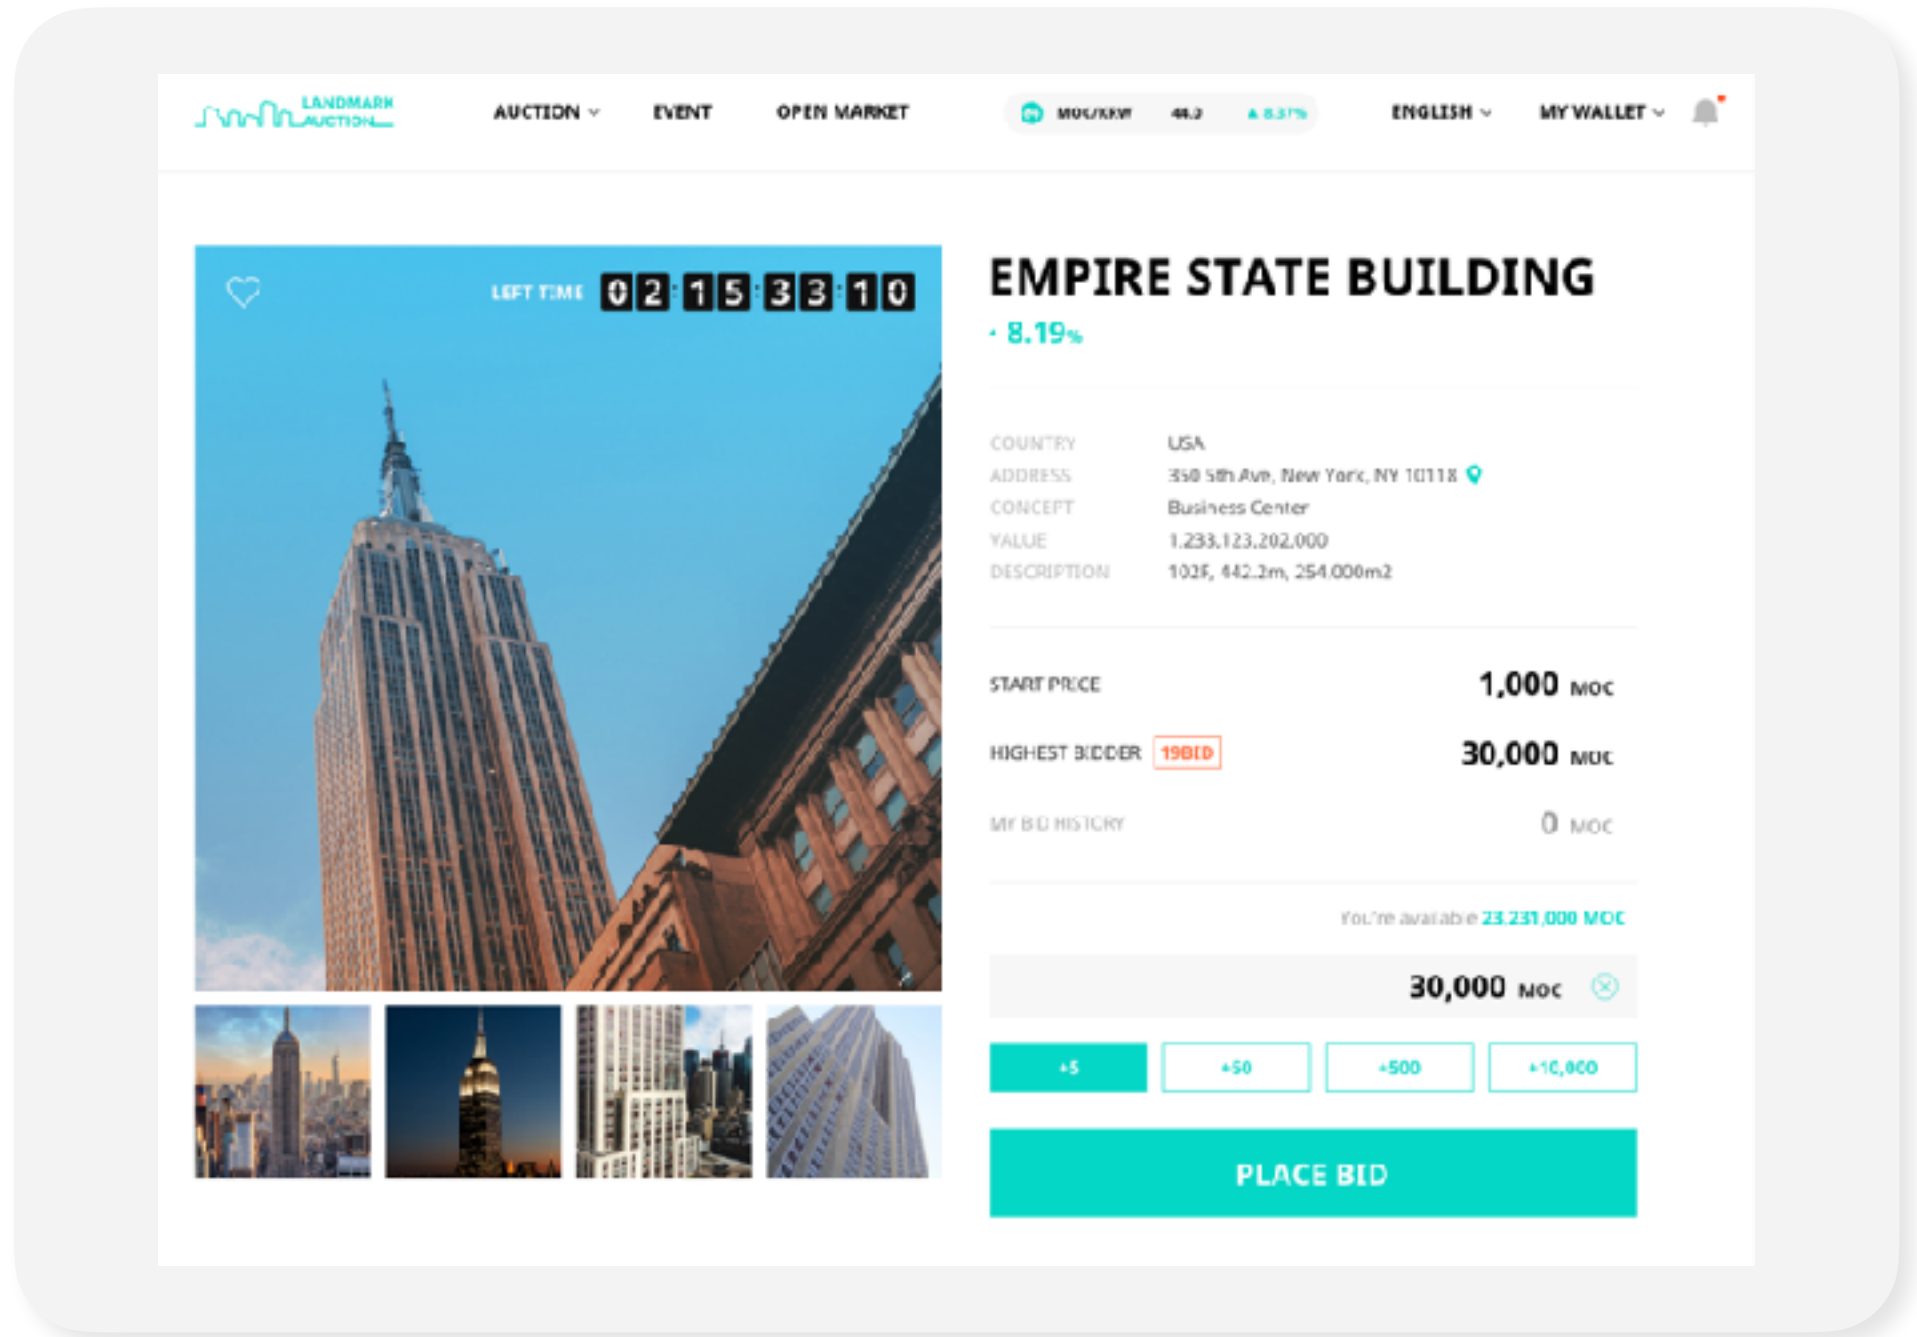

Mossland: The Auction Oct 2018

Mossland The Auction is an auction service launched on October 15, 2018, within Mossland, where NFT virtual landmarks are sold.

- Total sales of landmarks amount to approximately 3.3 million USD, with a total deposit amount of around 9 million USD.
- Highest bid price: Seoul City Hall - 1,253,500 MOC (Mosscoin)
- Highest traffic: ERC-721 transaction service, \$7,410,497 per day.

Reached the highest traffic among blockchain DApps at the time of service

Mossland: THE AUCTION	Volume 107,262,193 MOC	Price \$7,410,497
EOS Knights	Volume 2,161 EOS	Price \$9,662
Etheremon	Volume 2.13 ETH	Price \$374
CryptoKitties	Volume 91.3 ETH	Price \$16,118

Business Performance

Overview of Key Services by Year

Year	Project	Description
2022-Present	Mossland Metaverse	<ul style="list-style-type: none">• A metaverse platform that brings together microservices utilizing Mosscoin.• Key applications of Mosscoin include NFT exchange, gifticon shop, advertising platform, etc.• Decentralized governance framework.
2022	CyberTHUG Gecko Club	<ul style="list-style-type: none">• NFT breeding game where users breed gecko lizards as NFTs.
2022	CyberTHUG PFP NFT	<ul style="list-style-type: none">• Mossland's PFP (Profile Picture) NFT project.
2021	eSports AMX Prediction	<ul style="list-style-type: none">• Prediction event for the "KOLON AMX eSports Championship," a racing competition in eSports, conducted jointly by AMX and Mossland.
2020	Mossland Game	<ul style="list-style-type: none">• Attempts to integrate blockchain technology, including NFTs, into games on various platforms such as Gangster UnderGround, Liga Rocket, Royal Marvel, and Lamp Chronicle.
2019	Mossland: The Hunters	<ul style="list-style-type: none">• A location-based gaming reward app that offers NFT and cryptocurrency rewards.• Featured default integration of blockchain wallet on Samsung Galaxy S10.
2018	Mossland: The Auction	<ul style="list-style-type: none">• Mossland The Auction is an auction service where NFT virtual landmarks within Mossland are sold.
2018	Game Jam Seoul	<ul style="list-style-type: none">• Mossland co-hosted Blockchain Game Jam Seoul with Room Network to promote the development of the blockchain gaming industry. Over 50 participants from 7 teams showcased various blockchain technology applications during the 3-day event.

Business Performance

Performance Metrics - Mossland Game Jam Seoul Hosting in 2018

Co-hosted Blockchain Game Jam Seoul in collaboration with Room Network

- Event Period: September 7, 2018, to September 9, 2018
- Participation: 7 teams, 50 participants
- Achievements: 4 out of 7 teams successfully built functional DAppChains, and 7 blockchain game prototypes were developed.

List of Participating Teams' Project Names in the Game Jam

Project	Description
Stocking	A stock trading game where friends compete to see who can generate the most profit.
Unlimited Tower	A game where players climb a tower, earning profits along the way while fighting to reach the top.
Monster Raising	A 2D idle RPG game where monsters fight against heroes and wizards to protect dungeons.
Dizinda Creature	A game where players collect body parts in the map to create powerful creatures.
Loom Fight	A game where players become stronger with each victory against other players in fights.
Legendary Rental Shop	A game where players rent weapons to defeat monsters and receive rewards.
Moscat	A 3D cat-raising game with toy elements.

Performance Metrics - Mossland Metaverse in 2023

Key Performance Indicators (KPI)

Category	Content	Metric
Metaverse Platform	Total Users	5,367 users
MMOC Exchange within the Metaverse	Total Users of Deposits/Withdrawals	3,423 users
	Total MMOC Deposits/Withdrawals	4,772 transactions
	Total MMOC Deposits/Withdrawals Amount	169,313 MMOC
MOSSLAND DAO within the Metaverse	Total Proposals	80 proposals
	Total Votes Cast	137,294 votes
	Total MMOC Voted	Approx. 10,513,628 MMOC

Key Features

- Support for Kaikas and Metamask wallet login
- Communication channels supporting video, voice, text, and emojis
- Mossland DAO voting feature
- Personal wallet with MOC deposit/withdrawal capability
- Various Web3 games available
- Buying and selling NFTs and various digital/offline goods with MOC

Update Schedule

- October 2022: Open Beta Launch
- March 2023: Official Launch
- April 2023: Expansion of CyberTHUG map
- June 2023: MetaVerse advertising platform opening
- July 2023: Gifticon shop opening

Business Performance

Open-source based Mossland Metaverse Platform

Mossland Metaverse is an open-source metaverse platform where various microservices utilizing MossCoin (MOC) are gathered. It was developed to expand the utility of MossCoin and attract more users and developers into the Mossland ecosystem. In the Mossland Metaverse, users can trade digital and offline goods using MOC, accumulate points through various mini-games, and participate in events. By offering diverse experiences to users, we expect to attract a large number of users, resulting in significant expansion of MOC's liquidity and usability.

Key Features:

- Support for Kaikas and Metamask wallet login
- Communication channels for video, voice, text, and emojis
- Mossland DAO voting functionality
- Personal wallet enabling MOC deposits and withdrawals
- Various Web3 games available
- NFT trading and various digital/offline goods transactions using MOC

Mossland Disclosure System Update Roadmap

Disclosure System Progress

- 2023-01-09: Mossland Disclosure Website: Open-Source Node.js Backend for Market Data and Documents
 - The project is an open-source initiative for the Mossland disclosure website (<https://disclosure.moss.land>). It involves a backend source code based on Node.js, providing information through HTTP REST APIs. The provided information includes market capitalization (Mossland, CoinMarketCap, CoinGecko), circulating supply (Mossland, CoinMarketCap, CoinGecko), circulation supply plans, and disclosures/public documents.
 - https://github.com/mossland/mossland_disclosure_web
- 2023-05-30: Mossland Disclosure Website Update: Real-Time Transaction and Market Data, and Open-Source Community Statistics
 - The update to the Mossland Disclosure Website introduces new features aimed at enhancing transparency within the Mossland project. These features include the provision of real-time transaction information for Mosscoin, real-time market data, and statistics to foster an active open-source community.

Mossland Disclosure System Roadmap

- Q1 2023: Launch of the Mosscoin real-time circulation, circulation plan, foundation wallet information, and Mossland project documentation public site.
- Q2 2023: Update of Mosscoin real-time transactions, market data, and statistics on open-source community activities.
- 2024: Real-time information and statistics update on Mossland's decentralized governance framework.

2. Creating a Fair Environment for Token Holders

Disclosure of Circulation Plan

- We have disclosed the circulation plan until December 31, 2024, and have adhered to the plan.
(You can find the details at https://static.upbit.com/guide/circulating_supply/MOC.pdf)

Circulation Status Disclosure

- Provided through our API: <https://api.moss.land/MOC/info>
- External Services: CoinMarketCap <https://coinmarketcap.com/currencies/moss-coin/> CoinGecko <https://www.coingecko.com/en/coins/mossland>

Project Progress Update : We have actively shared the project progress through various communication channels.

- Twitter (<https://twitter.com/themossland>): Since January 2018, we have been sharing project progress with 23.4K followers.
- GitHub (<https://github.com/mossland>): Since April 2018, we have been disclosing source code and various documents through 9 public repositories.
- Website (<https://www.moss.land/>): Since the start of the project in 2018, we have been sharing project progress up to the present.

Disclosure : From July 8, 2019, to March 8, 2021, we have made a total of 13 disclosures of key project updates through Upbit project disclosures, Mossland website, and GitHub.

- Upbit project disclosures: https://upbit.com/service_center/disclosure
- Mossland website: <https://www.moss.land/#docs>
- Mossland GitHub: <https://github.com/mossland/Disclosure-and-Materials>

Creating a Fair Environment for Token Holders

Enhancing Transparency through Disclosure System and Open-Source Development

Improvement of Circulation Disclosure:

- Circulation plans will be distributed through our self-owned communication channels (Twitter, GitHub, website).
- Circulation status (real-time circulation provided by Mossland, external sources) will also be available on Mossland community channels.

Enhancement of Disclosure Items:

- Key Mosscoin-related matters: circulation plans, holdings status, major executions, lock-ups, burns, issuances, swaps, distributions, wallet transfers, and other relevant information (planned changes before implementation and results after implementation).
- Major changes in the Foundation's assets: decisions regarding transfers, and other relevant information (planned changes before implementation and results after implementation).
- Significant changes in the Foundation's management: appointments, resignations, and other relevant information (planned changes before implementation and results after implementation).
- Project progress: roadmaps, service launches, service terminations, service performance announcements, partnerships, and other important notifications.
- Any content that significantly impacts the project will be promptly disclosed.

Enhancement of Project Progress Transparency:

- From project planning to development, the process will be open-source on GitHub (with security-sensitive information kept private).
 - Mosscoin folder will have real-time access to GitHub's commit logs and Activity statistics, ensuring transparent evaluation of project direction, development progress, and developer capabilities.
- (Ongoing) Participation in project decisions through Mossland DAO for investors.
 - Execution plans for each project will be decided through holder voting, and the execution details will be made public.

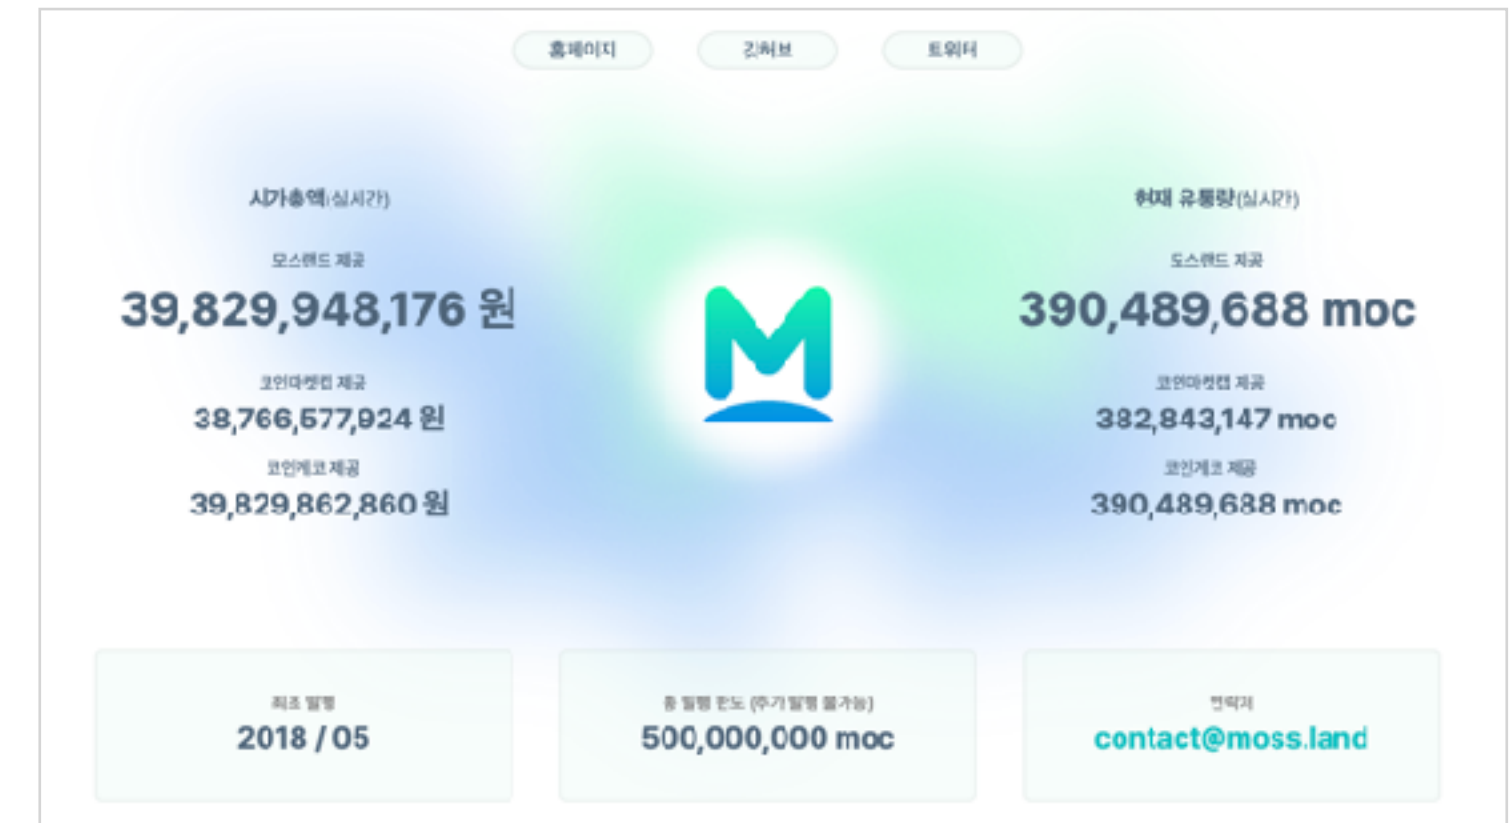

Creating a Fair Environment for Token Holders

Mossland Disclosure System

• January 2023 - Mossland Disclosure Site Launch

- Purpose: The objective is to provide comprehensive information on Mosscoin circulation plans and disclosures.
- Content:
 - Circulation Information Disclosure: Market capitalization, current circulation, circulation plans, foundation wallet list, detailed circulation change plans, etc.
 - Information Disclosure: Disclosure documents, project-related documents

• May 2023 - Mossland Disclosure Site Update

- Purpose: The goal is to activate Mosscoin and provide real-time activity information on the Mossland project to assist investors in project evaluation.
- Content:
 - Real-time Mosscoin transaction information: Contract source code, number of Mosscoin holders, recent transaction count, real-time transfer records provided
 - Real-time Mosscoin market information: Mosscoin trading volume, circulation, price indicators, real-time order book/trade history provided
 - Mossland Open-Source Activity Information: Real-time Github Code Frequency, Github Code Commits provided
 - Mossland DAO Activity Information: Total number of proposals, cumulative voting count, recent proposal status provided

Creating a Fair Environment for Token Holders

Enhancing Transparency through Open-Source Development Plan

- Starting from the H2 2022, we have been making the source code of Mossland projects publicly available on GitHub (<https://github.com/mossland>).
- Currently, 11 repositories have been created, and 13 contributors are actively participating in Mossland's open-source development.

Creating a Fair Environment for Token Holders

Participation of Mosscoin Holders in Mossland DAO

Expanding Fair Participation Opportunities for Mosscoin Holders through DAO

- Objective: Mossland aims to transition into a Decentralized Autonomous Organization (DAO) project by 2023. In October 2022, Mossland launched the beta version of Mossland DAO. Through this, even Mosscoin holders with just one MOC can have a fair opportunity to participate in proposals and voting for the future of the Mossland project.
- Implementation Approach: Mossland is utilizing DAO to openly share the fund's status, development progress, and gather holder feedback. Decisions are made through voting, ensuring transparency. This approach offers all Mosscoin holders an equal opportunity to participate in the project.

Current Progress for DAO Transition:

- Official GitHub repository for Mossland DAO Governance: <https://github.com/mossland/MossDAO>
- Mossland DAO Governance Documentation: https://github.com/mossland/MossDAO/blob/main/Mossland_DAO_Governance_EN.md
- DAO Transition Preparation: https://github.com/mossland/MossDAO/blob/main/README_EN.md#7-preparation-to-convert-into-mossland-dao
- Sample Proposal: https://github.com/mossland/MossDAO/blob/main/MIP_Sample_EN.md

DAO Transition Milestones:

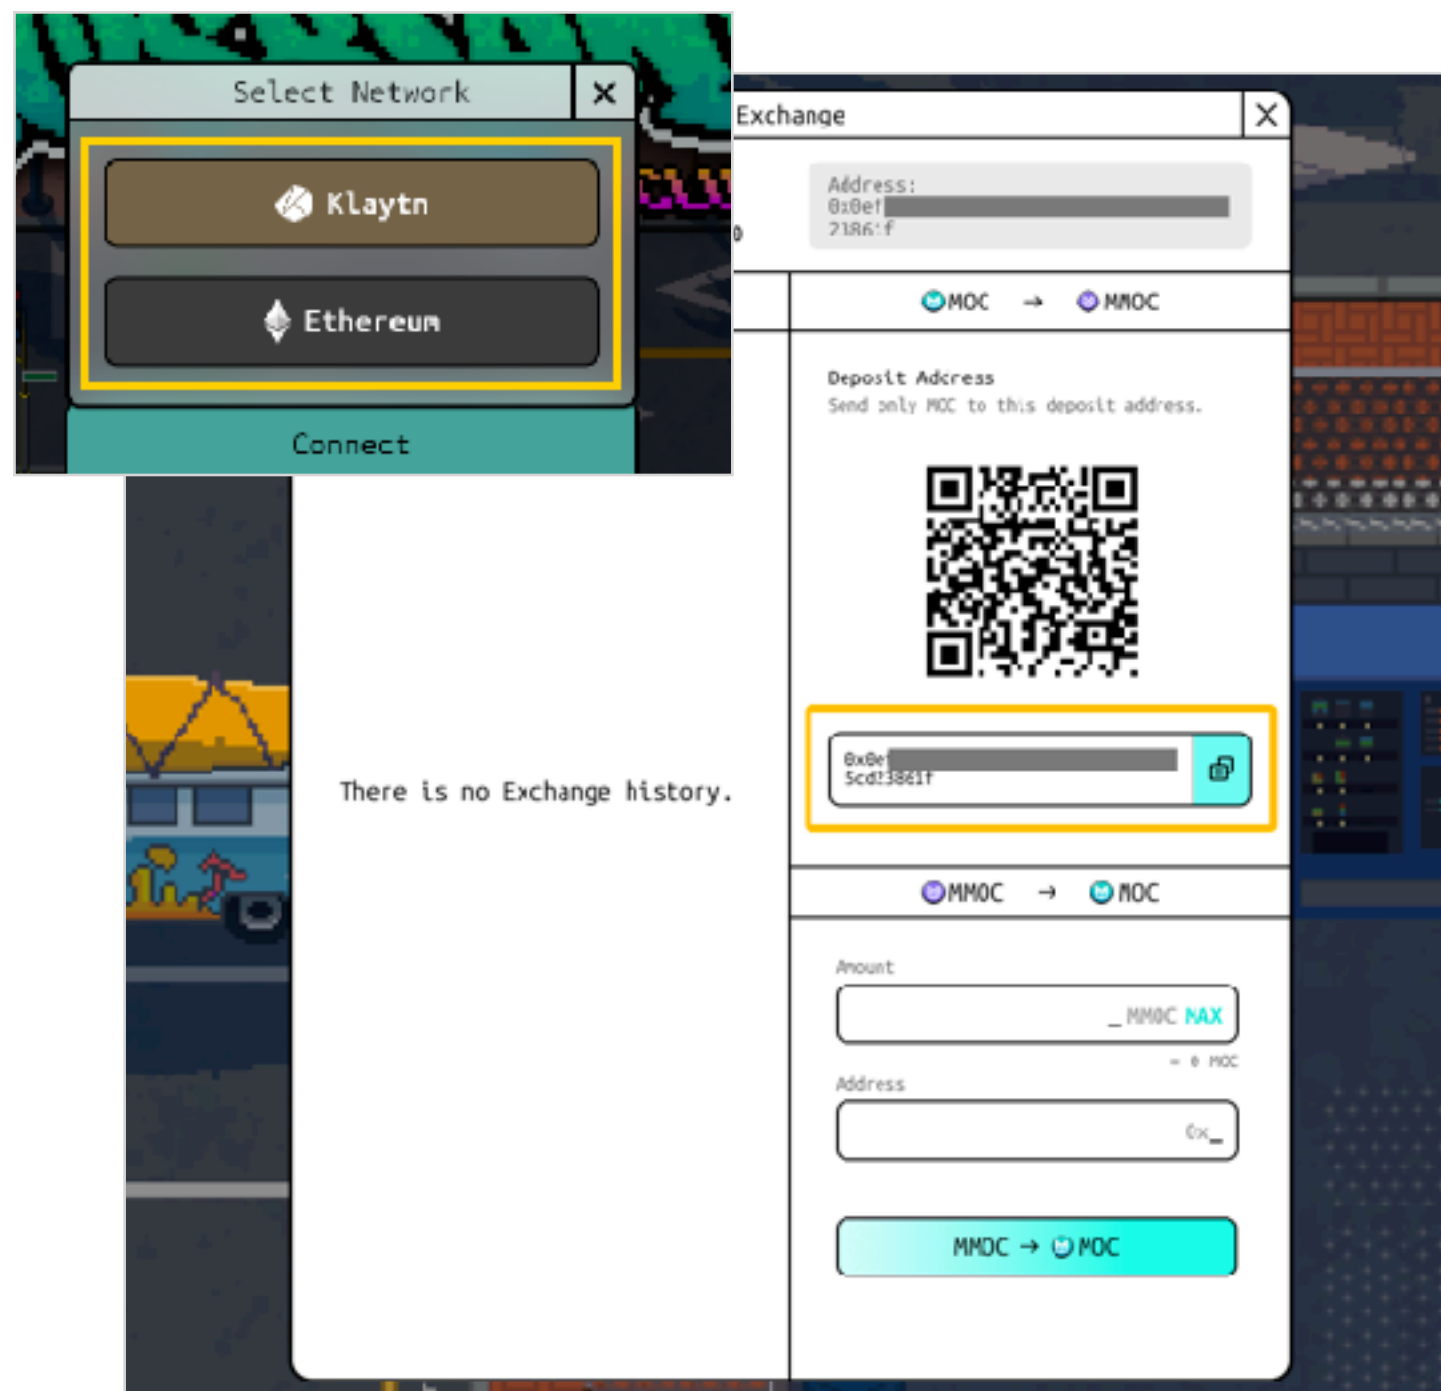

- Q4 2022: Launch and trial operation of DAO voting system (Limited DAO governance operation for Metaverse service development)
- 2023: Starting governance operations with the DAO voting system, introducing the DAO disclosure system for detailed Mossland operations.
- (Ongoing) 2024: Implementation of 2nd generation DAO voting system (Integration of voting system with on-chain transactions)

Creating a Fair Environment for Token Holders

Participation of Mosscoin Holders in Mossland DAO

Currently, all Mosscoin holders within the Mossland Metaverse have the ability to participate in DAO proposals and voting.

1. Wallet Login and Mosscoin Deposit

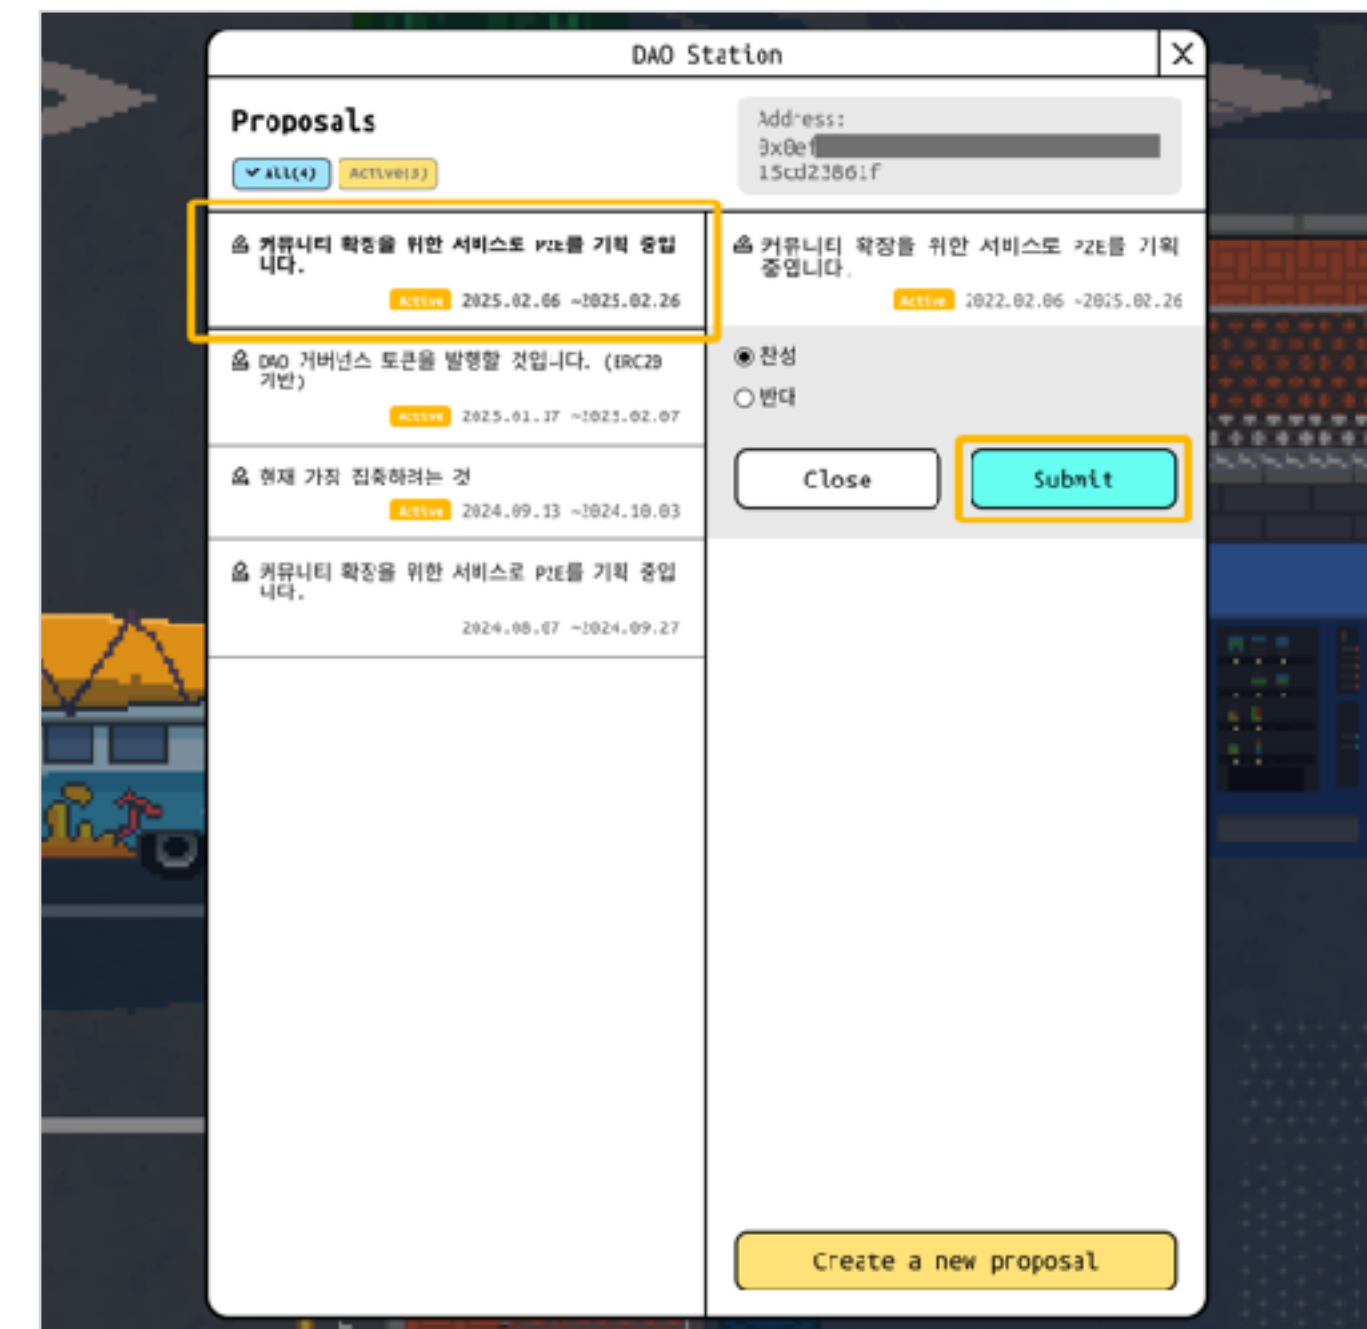

Mosscoin holders can acquire eligibility as governance members through crypto wallet login and deposit of Mosscoin.

2. Voting Proposals

All Mosscoin holders can make proposals regarding the project direction.

<https://github.com/mossland/MossDAO>

3. Participating in Voting and Checking Results

Once voting is concluded, the results can be checked.

Creating a Fair Environment for Token Holders

Expanding Fair Participation Opportunities for Mosscoin Holders in the Project

Progress of DAO Transition and DAO Activity Statistics for Mosscoin Holders

- Q4 2022: Launch and trial operation of DAO voting system (Limited DAO governance operation for Metaverse service development)
- 2023: Commencement of governance operations through the DAO voting system, release of DAO disclosure system with detailed Mossland operational information.

Key Metrics of Mossland DAO

Category	Sub-category	Detail
MOSSLAND DAO within Metaverse	Total Proposals	80 proposals
	Accumulated Voting Participation	137,294 times
	Accumulated Voting MMOC	Approx. 10,513,628 MMOC

Mossland Disclosure System, Real-time Mossland DAO Activity Statistics

Top Accumulated Voting Proposals in DAO:

- "Request for Comment and Reply Feature in DAO Votes"
- "Enhancement Request for Voting Booth Readability"
- "Request for Project Progress"

Creating a Fair Environment for Token Holders

Enhancing Investor Participation in Projects (Improvement of Decentralized Governance Framework)

Expanding Fair Participation Opportunities for Mosscoin Holders in Projects

- Mosscoin holders will have the opportunity to fairly participate in proposals and voting regarding the future of the Mossland project.
- Mosscoin holders can participate in determining the project's direction through voting in the Mossland DAO.
- We plan to add a system that provides detailed information about the fund's situation and development progress, significantly expanding the scope of investor participation in projects.

Current Progress for DAO Transition

- Official GitHub address for Mossland DAO Governance: <https://github.com/mossland/MossDAO>
- Mossland DAO Governance Document: https://github.com/mossland/MossDAO/blob/main/Mossland_DAO_Governance_KR.md
- Mossland Decentralized Governance Framework Implementation Site: <https://meta.moss.land>

Decentralized Governance Framework Roadmap

- Q2 2023: Commencement of governance operations through DAO voting system, implementation of Mossland disclosure system
- Q3 2023: Implementation of discussion feature for DAO voting
- Q4 2023: Program implementation to activate decentralized governance (marketing, PR)
- H1 2024: Implementation of integration between voting system and on-chain transactions
- H2 2024: Implementation of task management system for decentralized governance framework

3. Technical Capabilities and Advancement

Key Technologies	Technology Overview
Crosschain Bridge	<ul style="list-style-type: none">• Developing a swap page for Luniverse tokens and ERC20 tokens using Ethereum contracts• MOC (LMT) ↔ Wrapped MOC (ERC20)
Web3 Metaverse	<ul style="list-style-type: none">• A structure that allows various services to expand within the metaverse in iframe format• Currently in open beta (https://meta.moss.land)
Luniverse Main Token-based DAO	<ul style="list-style-type: none">• Developing a DAO on the metaverse for voting, results disclosure, and implementation• Developed by combining on-chain and off-chain using Luniverse's DEOA
Klaytn-based DAO	<ul style="list-style-type: none">• Service CyberTHUG DAO available at https://portal.thecyberthug.com• Developed by combining on-chain and off-chain
Crosschain Transaction	<ul style="list-style-type: none">• Developed to purchase Klaytn-based NFTs using Luniverse Main Token (MOC)• Performed Klaytn NFT minting using smart contract development, avoiding concurrency issues and misdeposits with MOC• Swap Service Development using the Luniverse Ethereum Bridge Contract
NFT Minting, Reveal, Contract Updates	<ul style="list-style-type: none">• Established a generative PFP NFT creation pipeline• Successfully conducted Klaytn-based NFT minting and reveals• Smoothly updated KIP17 smart contracts after reveal and completed swaps
Mossland Service Development	<ul style="list-style-type: none">• Auction service indicates high interest in cryptocurrency and virtual assets• Hunter's app showcases the potential of combining cryptocurrency and location-based reward apps• Gangster app demonstrates VR potential• LigaRocket app combines random games and ranking systems• RoyalMarble app merges CCG and randomness into a traditional board game• Match Prediction 999 app combines sports match result predictions and ranking systems• Introducing new NFTs through the CyberTHUG universe• Continued support for hackathons to encourage new service development

Chain Activeness and User Participation

Services: Prediction 999 and The Hunters

Winning Prediction 999 (Service Started on April 1, 2021 ~ Service Ended on March 8, 2022)

- Luniverse Sidechain Transaction Count: Approximately 35,000 transactions
(<https://sidescan.luniverse.io/chains/1552703081928841640/accounts/0x54511a59ffe03cc21f4b05a1fa0d6c5b3beea68>)
- Using Luniverse's Trace API, match results were recorded on the blockchain and transparently shared with users of the Winning Prediction 999 service.
(<https://docs.luniverse.io/service/luniverse-service/trace>)
- Note: There is an error on the Luniverse sidechain explorer that displays a transaction count of 105. A correction request has been made to Luniverse
(Reference the most recent Trace transaction's Nonce 35306 and API usage: <https://sidescan.luniverse.io/chains/1552703081928841640/transactions/0xa3814bd8576be81c3c242c38e5453272770de51150ea188135cafd8e1efe4edc>)

Mossland: The Hunter (Service Started on May 20, 2019 ~ Service Ended on May 18, 2020)

- MOC (ERC-20) Deposit/Withdrawal Transaction Count: 2,077 transactions
(<https://etherscan.io/address/0x910d7a43eaf49f035552fcc083782b18cbbbea53#tokentxns>)
- Support for MOC Deposit/Withdrawal through Samsung Blockchain Wallet
(<https://www.samsung.com/global/galaxy/apps/samsung-blockchain/>)

Chain Activeness and User Participation

Services: Mossland Metaverse

Open Source Mossland Metaverse (Beta Service Started in October 2022 ~ Present)

- Key Features: Providing Web 3 services (such as games), offering various use cases for Moss Coin (NFT/offline goods exchange, gift card shop, advertising platform), and incorporating DAO functionality.
- Top Voted Items in DAO: "Request for Comment Reply Feature in DAO Vote," "Enhancement Request for Polling Station Readability," "Request for Project Progress Update”

Category	Detail	Content
Metaverse Platform	Accumulated Users	5,367 users
MMOC Exchange within Metaverse	Accumulated Users for Deposits and Withdrawals	3,423 users
	MMOC Deposits and Withdrawals	4,772 transactions
	Total MMOC Deposited and Withdrawn	169,313 MMOC
MOSSLAND DAO within Metaverse	Total Agenda Count	80 agenda
	Accumulated Voting Participation	137,294 times
	Accumulated MMOC Voted	Approx. 10,513,628 MMOC

MMOC (Meta MOC): A virtual currency used within the Mossland Metaverse, exchangeable with MOC at a 1:1 ratio.

Chain Activeness and User Participation

Limitations of the Luniverse Network and Proposed Solutions

While developing the open-source metaverse platform, we recognized that the Mosscoin based on the Luniverse network was not entirely suitable for the Web3 ecosystem through MetaMask. In response, we implemented the following improvements:

- Completion of DAO Development using Luniverse DEOA: Within the metaverse platform, we integrated DEOA to create user personal wallets, thereby simplifying the interface for Mosscoin holders to participate in services.
- Connectivity with the Ethereum Network via the Luniverse Bridge: We ensured MetaMask support for Mosscoin on the Luniverse network, enhancing user accessibility to Mossland services. (Bridge link: <https://bridge.luniverse.io/bridge>)

Additionally, we are extending Mosscoin to the Ethereum network (ERC-20) to expand the target user base of Mossland services.

- We are currently developing real-time swap functionality between the Luniverse and Ethereum networks.
- Beta launch is planned for Q4 2023, followed by full launch in Q1 2024. Details can be found at: <https://meta.moss.land/en/swap>
- The total supply and distribution plan remain unchanged.

5. Liquidity

Challenges in Mosscoin Liquidity Level

Currently, Mosscoin is listed on a single exchange due to limitations in trading support on the Luniverse network. Mossland has faced difficulties in global liquidity level as a result. In the first half of 2020, a strategic partnership was formed with the Luniverse network and a swap from the Ethereum network to the Luniverse network was carried out. However, at that time, most exchanges and DEXs did not support the Luniverse network, leading to delisting. Subsequently, efforts by the Luniverse network led to support being added by some exchanges, yet major exchanges still do not support Luniverse, limiting global liquidity level.

The limitations of supported exchanges have constrained Mosscoin holders and Mossland's service target primarily to South Korea. This has posed challenges in activating Mossland's user base and expanding to overseas exchanges.

Past exchanges where Mosscoin was listed:

Exchange Name	Country	Listing Date
Gopax, Gopax IN	Republic of Korea, Indonesia	2018 Q2
BCEX	China	2018 Q3
Kyber	China	2018 Q3
Bittrex US	USA	2018 Q4
Bittrex International	EU (Malta)	2018 Q4
Upbit, Upbit SG	Republic of Korea, Singapore	2019 Q1

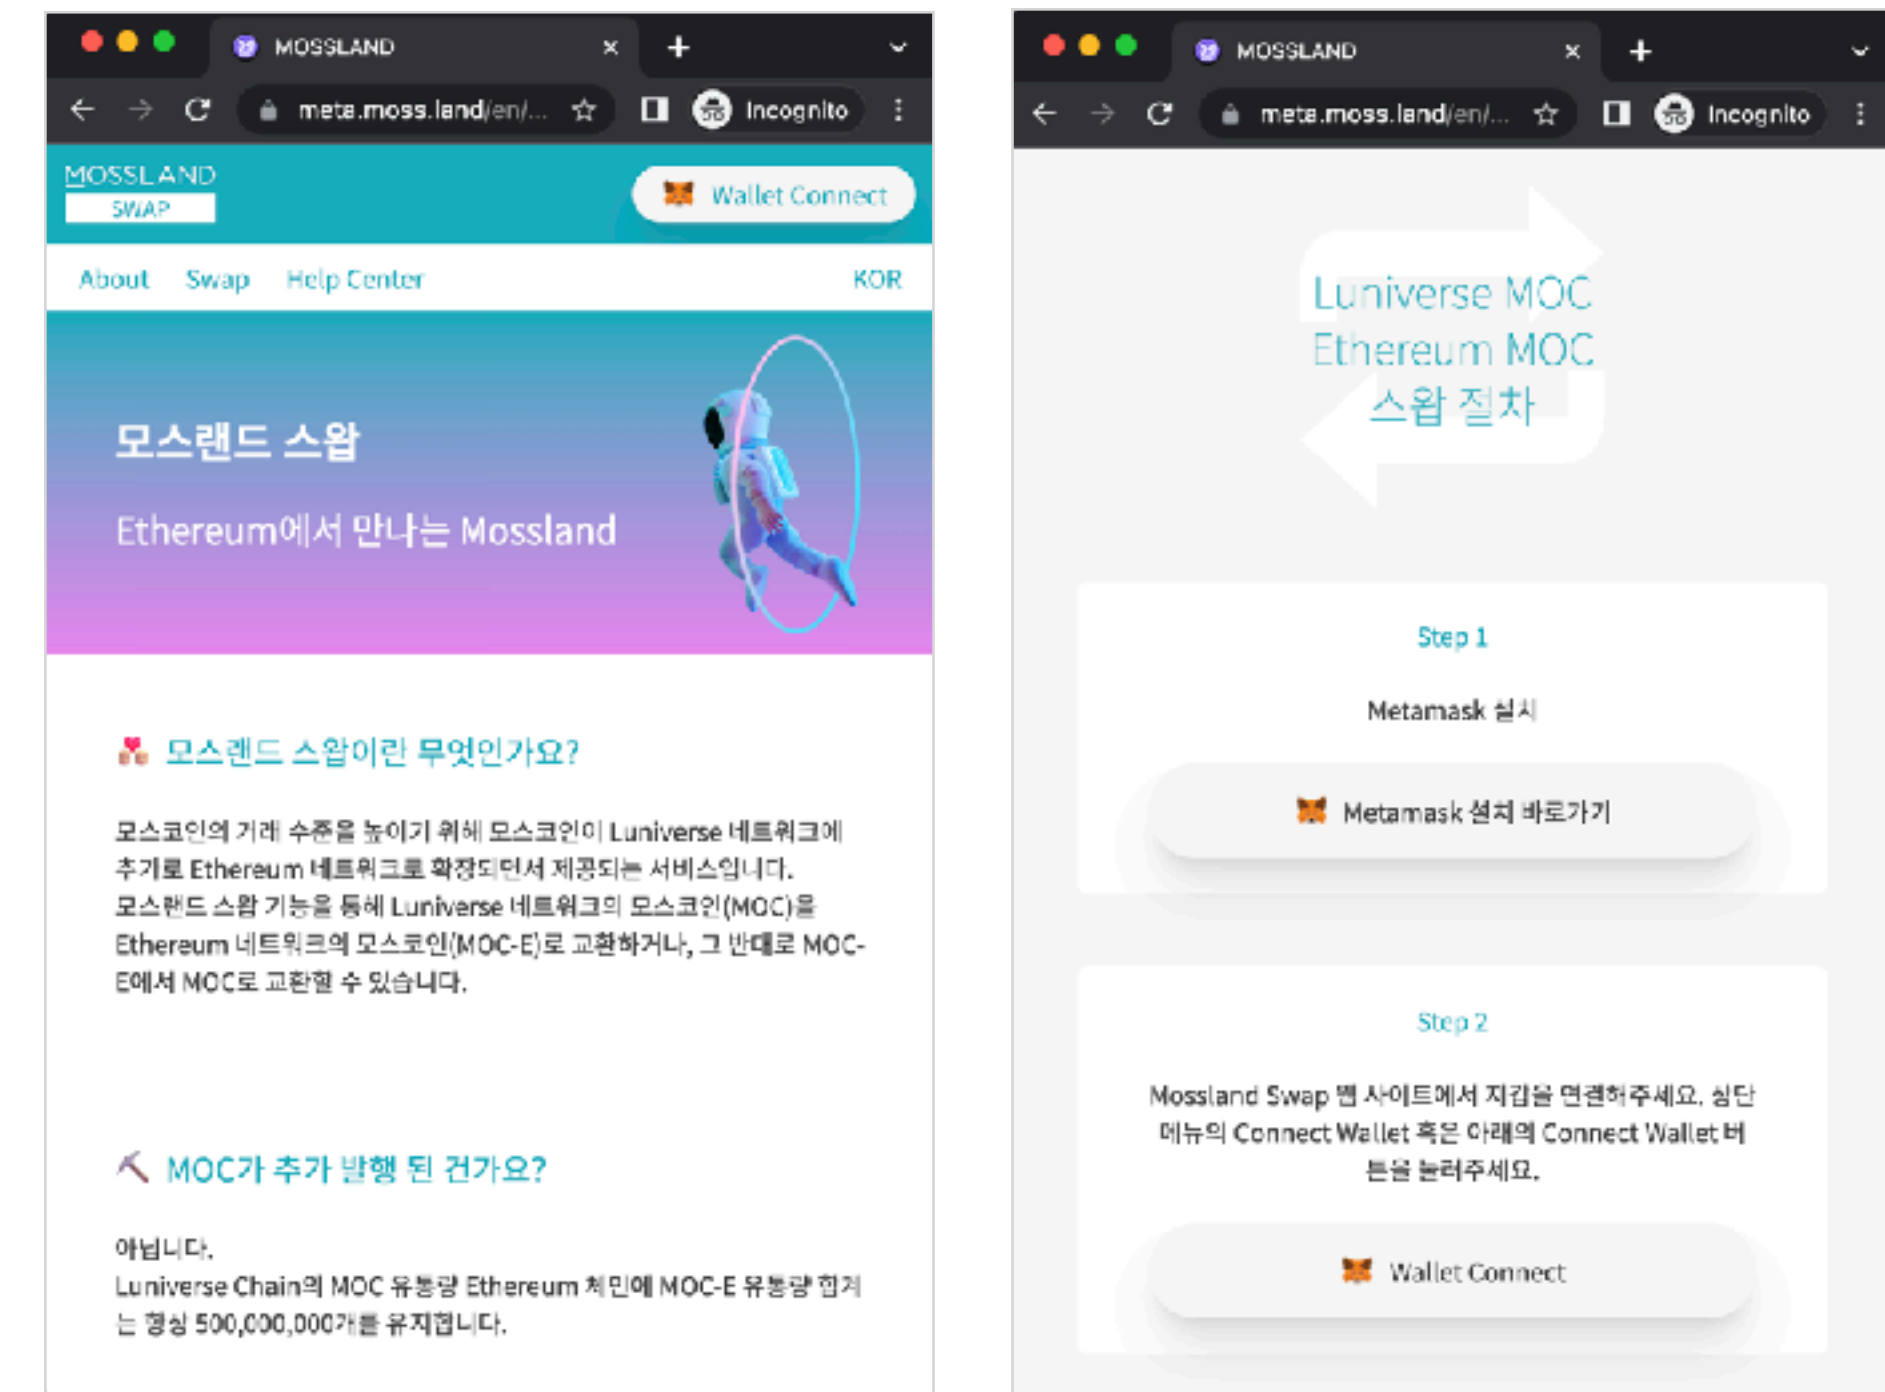

Liquidity

Enhancement of Liquidity through Ethereum Network Support

Expanding Moss Coin to Ethereum Network Support

- Currently developing a real-time swap feature between the Luniverse and Ethereum networks
 - Beta launch planned for Q4 2023, official launch set for Q1 2024
<http://swap.moss.land/>
 - There is no change in the Market Cap and Circulating Supply
- Aiming to list on ERC-20 based exchanges through Ethereum Network Support
 - Targeting the addition of at least one more exchange listing by Q2 2024

Expanding Moss Coin with Ethereum Network Support
Development of Real-Time Swap Function

6. Compliance with Regulations

Mossland has conducted legal reviews and obtained Legal Memos when possible in accordance with regulatory guidelines from authorities. Over the past 6 years, starting from 2018, we have made diligent efforts to swiftly and accurately adhere to regulatory guidelines, ensuring there were no legal issues. Moving forward, we will continue to operate in compliance with regulations.

Key Legal Reviews and Business Pursuits by Mossland:

- 2018 - Singapore: Legal memo of Singapore MAS regulations and securities laws
- 2018 - USA: Legal memo of US securities laws and CFTC regulations
- 2019 - Malta (Europe): Legal memo for Bittrex Global
- 2019 - Indonesia: Legal memo for blockchain gaming services
- 2020 - Singapore: Legal memo of PSA (Payment Service Act)
- 2021 - South Korea: Legal memo for Moss Coin buyback model
- 2021 - South Korea: Legal memo of Moss Coin securities laws
- 2023 - EU: Legal memo for Moss Coin as financial product or e-money

AML/KYC/CFT Regulation Compliance:

- 2018 - Singapore: AML/CFT legal memo
- 2020 - AML/KYC Policy update

Security Audits:

- 2018 - SEWORKS Smart Contract Audit [[Contract source code link](#)]
- 2023 - CertiK Smart Contract Audit [[Contract source code link](#)]
